

ENERGY PORTFOLIO MANAGEMENT FOR UTILITIES

Internet of Things (IoT), Renewable energy sources, and big data have come together to create vast opportunities in the utility and energy sector. To be effective and efficient, utility and smart grid companies need to innovate and renew themselves. Energy Portfolio Management solutions from 50 Hertz Limited play an important role in empowering the energy sector to realize current and future business value and have become the building block for future use cases.

These use cases include short and long-term power load forecasting, trading, load balancing, grid optimization, lowering costs and optimizing revenue potential. EPM improves mission critical investments, trading, and operations decisions for customers. Our mission is to support critical energy investment decisions and to support efficient energy operations across planning, forecasting, trading, portfolio optimization and market operations.

Functional Map
